

WIND RIVER'S ADVANCE SECURITY PACKAGE (ASP)

ABOUT WIND RIVER'S ADVANCED SECURITY PACKAGE

The Advanced Security package (ASP) is designed with businesses in mind that may not have an IT staff dedicated to Risk or are familiar with the PCI DSS requirements. This simple-to-use package is priced affordably for your business, providing a greater breadth in the security market than any other offering from a single vendor. You could easily pay much more for these same capabilities if purchased independently from other vendors.

Security is the foundation of compliance. The Advanced Security Package offers a number of security solutions to address your business requirements for becoming and staying secure, including Antivirus, Remote Access Detection and Web Malware and Content Monitoring.

The ASP is designed to improve your overall security posture by adding additional layers to your defenses and it can also streamline your PCI DSS compliance process.

The Advanced Security Package includes:

- Security Awareness Training & Security Policy Templates
- Security Health Check and Beacon
- Policy and Security Monitoring
- POS (Point of Sale) Application Detection
- POS (Point of Sale) Review Tool
- File Integrity Monitoring (FIM)
- Security Policy Generator

Payment card data is a prized commodity in the cybercriminal underworld and is usually the main target for attacks against commercial environments, such as point-of-sale (POS) and e-commerce infrastructures. More than half of the incidents investigated in **2016 by our data security partner, Trustwave, targeted payment card data, with 33% of attacks targeted at card track or magnetic stripe data, and 30% targeting card-not-present (CNP) data**¹.

You may think that being a small or medium sized business (SMB) will help you escape from these cybercriminals, unfortunately, research shows that **71% of cyber-attacks occur at businesses with fewer than 100 employees**². If your customers' data is leaked, they aren't going to give you a pass and may not come back to do business with you, as we know **that almost 50% of cardholders are likely to avoid stores hit by data breaches**³. That said, making security a top priority is vital to the success and growth of your business.

At Wind River, we know that securing your customers' payment card data can be challenging. For this reason, we have partnered with Trustwave, a leading provider of security services and PCI DSS compliance validation tools for merchants, to help you protect your business from a data breach. Together, we have developed a customized Advanced Security package, suited for all levels of payment processing that will not only help you to meet PCI compliance requirements, but give you peace of mind that your business is fully secure.

YOUR COMPLIANCE EFFORTS

The Advanced Security Package simplifies the process for you by presenting a pathway that's customized to your business. The ASP will prompt you to install the security tools that have been integrated in to your program and then guide you to the appropriate self-assessment questionnaire, walking you step-by-step through the process of certifying PCI DSS compliance, prefilling some of the questions for you to speed up the PCI validation process and ensure that your business is secure.
